

Screen Out™

Patents Pending

Screen Out™ Screen Blanking and Keyboard Disabler Technology

Screen Out is the latest safety innovation from Mobile Office Solutions to join the Mobile Desk brand.

Screen Out is a hardware/software solution that is designed to blank a mobile user's laptop screen and / or render the keyboard and mouse inactive when it senses the motion of the vehicle.

The connection is made by way of a wired or wireless connection through the Screen Out™ OBDII trigger device.

The robust features and capabilities of Screen Out have been developed and refined from our 10 years of extensive research and development working with the utility industry field force.

Screen Out addresses many of the driver distraction concerns of any company that has mobile computer users that work out of their vehicles.

Screen Out will make your fleet and communities safer by completely eliminating the in-vehicle computer as a distraction while the vehicle is moving.

Improve the Safety of Your Field Automated Workers with Screen Out Today!

Key Features

- Blanks the Computer Screen when the Vehicle is in Motion.
- Will not Affect Users Outside of the Vehicle
- Works in Any Vehicle
- Transparent to the End User
- Disable your Keyboard and Mouse Only option
